/note="Torgan: Fourth apical stalk internodes of adult /note="Torgan: Fourth apical stalk; Site_2: NotI; An plants; Vector: pSportI; Site_1: SalI; Site_2: NotI; An unidirectional cDNA library generated from [Fourth apical stalk internodes of adult plants]. cDNA was prepared from polyA+ mRNA using SuperScript Plasmid System Kit (Invitrogen). The double-strand cDNAs were fractionated in a sepharose CL-2B 40cm-columns and fragments sizing between 0.8 and 1.5 Kb were directionally cloned into the vector. Details of each source of RNA and library construction can be obtained at http://sucest.lad.ic.unicamp.br/public"

Claim 18; SEQ ID NO 1; 22pp; English.

The invention relates to a pure polypeptide comprising a fully defined Myb protein transcription factor OsMYBS1, OsMYBS2 or OsMYBS3 protein sequence, where the polypeptide regulates expression of a gene in a cell.

```
The polypeptide is useful for regulating expression of a gene in a plant cell, preferably rice or barley cell. The method is useful for identifying a compound that modulates the activity of the polypeptide. An antibody to the polypeptide is useful for detecting the presence and distribution of OsMYBS proteins in tissues and in cellular compartments and for verifying the expression of OsMYBS proteins in a transgenic plant. Nucleic acid encoding the polypeptide is useful for generating a transgenic plant or producing to determine whether an OsMYBS mRNA is expressed in a tissue or cell. Nucleic acid encoding the polypeptide is also useful as primers in PCR-based detection methods, or as labelled probes in nucleic acid blots (e.g. Northern blots). The compound identified by the method is useful for enhancing or repressing the expression of a gene regulated by the polypeptide, e.g. alpha-amylase gene. The present sequence represents cDNA encoding the rice Myb protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                              문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a pure polypeptide comprising a fully defined CC Myb protein transcription factor OsMYBS1, OsMYBS2 or OsMYBS3 protein CC sequence, where the polypeptide regulates expression of a gene in a cell. The polypeptide is useful for regulating expression of a gene in a plant CC cidentifying a compound that modulates the activity of the polypeptide. An CC distribution of OsMYBS proteins in tissues and in cellular compartments and for verifying the expression of OsMYBS proteins in tissues and in cellular compartments CC and for verifying the expression of OsMYBS proteins in a transgenic CC plant. Nucleic acid encoding the polypeptide is useful for generating a CC expressed in a tissue or cell. Nucleic acid encoding the polypeptide is a compound CC also useful as primers in PCR-based detection methods, or as labelled CC probes in nucleic acid blots (e.g. Northern blots). The compound CC identified by the method is useful for enhancing or repressing the expression of a gene regulated by the polypeptide, e.g. alpha-amylase CC camyras; Cns.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

CC that encodes a cotton protein or its fragment comprising an EST CC (expressed sequence tag) appearing as ADP99999. ADP95919. Also included are a substantially purified cotton protein or its fragment encoded by a CC inclaic acid molecule above and a transformed plant (having a nucleic acid molecule which comprises: an exogenous promoter region which CC functions in a plant cell to cause the production of a mRNA molecule; a CC structural nucleic acid molecule comprising one of the ESTs or their CC cell to cause termination of transcription and addition of polyadenylated CC ribonucleotides to 3' end of the mRNA molecule). The ESTs are useful as CC molecular tool for the targeting and isolation of novel genes for plant CC pathways, for isolating genes and promoters, for identifying and mapping CC determining gene function. The cotton nucleic acid molecules are useful as molecular tags to isolate genesic regions, isolate genes, map genes, and determining if genes are members of a particular gene family and for use in marker-assisted breeding programs. The present sequence is one of the CC 4930 cotton ESTs of the invention. NOTE: The sequences are not displayed on the specification but are available in electronic format from the

                                                                                                                                                                                                               The invention relates to a transgenic plant having recombinant CC polynucleotide (II) encoding polypeptide comprising at least 6 consecutive amino acids of a sequence chosen from the protein sequence CC consecutive amino acids of a sequence chosen from the protein sequence CC encombinant polynucleotide alters a trait of the seed transgenic plant CC when compared with same trait of another plant lacking recombinant CC when compared with same trait of another plant lacking recombinant CC included are altering (MM) a trait associated with seed (comprising: CC transforming a plant with (II); selecting the transformed plants; and CC identifying a trait associated having altered trait), altering (M2) the expression levels of at least one gene of a plant (involving CC transforming the plant with (II) and selecting the transformed plant), CC altering (M3) a trait associated with a plant's seed (comprising a nucleotide sequence comprising least 18 consecutive nucleotide comprising a consecutive nucleotide comprising a nucleotide appearing the database sequence with a polypucleotide or a sequence, comparing the database sequence with a polypeptide or a complication of the plant) and altering a plant's trait (involving a database sequence in the plant) and altering a plant's trait (involving a database sequence in the plant) and altering a plant's trait (involving providing a test polynucleotide detailed above, selecting a database sequence (comprising the test polynucleotide with a polypeptide or a plant's trait (involving providing a test polynucleotide detailed above, selecting a trait of the polynucleotide detailed above at low stringency and transforming the sequence sequence comprise the comprise trait. The method (M3) is useful for altering a plant's trait (involving a protein) and intering a plant's trait of the present sequence sequence and trait altering a plant's trait is such as seed or plant size, stress tolerance, yield or disease contents, seed trait altering a protein of the invention.

The invention relates to a recombinant polynucleotide that alters a plant's environmental stress tolerance when compared with the same trained another plant lacking the recombinant polynucleotide. Also included are a transgenic plant comprising the novel recombinant polynucleotide having a sequence that encodes a polypeptide comprising at least 6
                                                                                             New recombinant polynucleotide for altering the reeexpression of plants to modify the plant's traits,
                                                                                                                                                                       Samaha

The recombinant polynucleotide and methods are useful for altering the regulation of gene expression of plants to modify the plant's traits, in particular with respect to environmental stress responses (e.g. to viral infection, fungal infection, microbial infection, herbicide resistance, heat, cold, heavy metals, low light, drought, osmotic stress and salt concentration). The present sequence is an environmental stress related polynucleotide of the invention.

                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to the isolation of novel plant (arabidopsis thallana) polynucleotide sequences that encode transcription (factors (TFs), and the polypeptide sequences for the TFs. The polynucleotide sequences for the TFs. The complete sequences are useful in screening for a transcription of factor that modifies a plant trait. Also disclosed is an expression comparising a TF polynucleotide sequence, a host cell comprising the expression vector, a transgenic plant comprising or ectopically compressing an isolated TF polynucleotide sequence, a method for screening for a molecule that modifies a plant trait, a method for producing a complete sequence thomologous to a TF polynucleotide or polynucleotide sequence, and a method for screening for a modifies a plant trait. The present sequence conducted a novel A. thaliana TF of the invention. Note: The sequence data for this patent did not form part of the printed specification. The complete sequence data for this patent as obtained in electronic format contractly from the HERPON who site at senders unstained in electronic format contractly from the HERPON who site at senders unstained in electronic format contractly from the HERPON who site at senders unstained in electronic format contractly from the HERPON who site at senders unstained in electronic format contents.

Coassette, producing a modified plant having a modified trait, identifying a factor that is modulated by or interacts with a polypeptide encoded by the polypucleotide sequence and identifying at least one downstream copynucleotide sequence and identifying at least one downstream copynucleotide sequence and identifying at least one downstream copynucleotide sequence that is subject to a regulatory effect of any of the polypucleotide described above. The character is useful for producing a plant that has an altered traits e.g. an enhanced tolerance to abiotic stress (increased tolerance to heat, tolerance to observe the conditions, freezing tolerance to common to cold conditions, freezing tolerance to the conditions, tolerance to potassium the cold indication, decreased sensitivity to mitrogen limitation, altered susceptibility to producing a latered susceptibility to cold the conditions, tolerance to potassium and the cold conditions to the cold, an altered susceptibility to science to ensitivity to abscisic acid, an altered susceptibility to science thinks, altered susceptibility to science thinks, altered susceptibility to science thinks, altered susceptibility to science architectural change, altered susceptibility to science architectural change, actange in set mbifurcations, alack of a shoot meristem, reduced meristem cell captions of flowering, altered specific crichome development, altered stem morphology, increased root thairs, altered stem morphology, increased root fairs, altered stem morphology, increased cold aftered traition, increased plant size, a change in leaf morphology, increased to root of content, an alteration of leaf glucosinolate content, change in seed of susceptibility acid content, decreased leaf anthocyanins, an alteration of leaf flucosinolate content, change in seed of scoulate in protein content, decrease in seed fatty acid content, increase in seed fatty acid content, decrease in seed fatty acid content, decrease in seed fatty acid content, decrease in seed fatty acid content, sec
     The invention relates to a transgenic plant comprises a recombinant polynucleotide having a polynucleotide sequence or its complementary sequence comprising a sequence encoding a polypeptide, that initiates transcription (i.e. a transcription factor) from Arabidopsis, Soybean, Rice, Rape or Corn, comprising any of the sequences appearing as ADO01588-AD003527 or AD003530-AD003559. Also included are using a transgenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              plant to grow a progeny plant, an expression cassette (comprising a constitutive, inducible or tissue-specific promoter and a recombinant polynucleotide described above), a host cell comprising the expression

                                                                                                                                                                                               The invention relates to a novel isolated polynucleotide comprising a CC first nucleotide encoding a polypeptide of 217, 120, or 268 amino acids that has 85%, 95%, or 96% identity based on the clustal method of CC alignment when compared to a polypeptide selected from Myb polypeptides sequences of 128, 258, or 268 amino acids fully defined in the Specification, or a second nucleotide sequence comprising the complement CC specification, or a second nucleotide for sequence comprising the complement CC of the first nucleotide. The isolated polynucleotide is useful for obtaining a nucleic acid fragment encoding an Myb-related transcription factor polypeptide by using it to probe cDNA or genomic libraries. A CC factor polypeptide by using it to probe cDNA or genomic libraries. A CC funcleic acid fragment obtained using the isolated polynucleotide is useful to isolate cDNAs and genes encoding homologous proteins from the constant or other plant species. The nucleic acid fragment is also useful to create transgenic plants in which the Myb-like protein is present at higher or lower levels than normal or in cell types. This polynucleotide is sequence represents the DNA of an Myb-related transcription factor of the

                                           The invention comprises the amino acid and coding sequences of Mybrelated transcription factors - these proteins are involved in transcriptional regulation in plants. The DNA and protein sequences of the invention may be used to facilitate studies to better understand gene regulation in plants and provide genetic tools to enhance or otherwise alter the expression of genes controlled by Myb-related transcription factors. The present DNA sequence encodes an Myb-related transcription
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Myb-related transcription factor; transcriptional regulation; gene regulation; soybean; gene; ds.

New substantially purified nucleic acid molecule that encodes a maize, soybean or Arabidopsis thaliana transcription factor or its fragment, useful for genome mapping, gene identification and analysis or plant

Claim *ې* SEQ ü ŏ 713; 140pp; English.

The invention describes a substantially purified nucleic acid molecuthat encodes a maize, soybean or Arabidopsis thaliana transcription factor or its fragment, where the maize or soybean transcription fac is homeobox, HLH, leucine zipper, zinc finger, or other transcriptic factor. Also described are: a substantially purified maize or soybean transcription ize or soybean molecule factor

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC transcription factor or its fragment defined above; a substantially CC purified antibody or its fragment which is capable of specifically CC binding to the transcription factor or its fragment above; a transformed CC plant; a method for determining a level or pattern in a plant cell of a CC transcription factor in a plant metabolic pathway; a method of CC determining a mutation in a plant; a method of producing a plant CC containing an overexpressed protein ore reduced levels of plant CC transcription factor; a method of determining an association between a CC polymorphism and a plant trait; and a method of isolating a nucleic acid that encodes a plant transcription factor or its fragment. The nucleic acid molecules, proteins and their fragments are useful for genome constructs for use in plant gene expression and transgenic plants. The nucleic acid molecules are useful as markers or probes. This sequence CC represents a maize transcription factor polynucleotide.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention describes a substantially purified nucleic acid molecule CC that encodes a maize, soybean or Arabidopsis thaliana transcription CC factor or its fragment, where the maize or soybean transcription factor CC is homeobox, HIH, leucine zipper, zinc finger, or other transcription factor CC factor. Also described are: a substantially purified maize or soybean CC transcription factor or its fragment defined above; a substantially CC purified antibody or its fragment which is capable of specifically CC purified antibody or its fragment which is capable of specifically CC plinding to the transcription factor or its fragment above; a transformed CC plant; a method for determining a level or pattern in a plant cell of a transcription factor in a plant metabolic pathway; a method of CC determining a mutation in a plant metabolic pathway; a method of CC determining an overexpressed protein ore reduced levels of plant CC transcription factor; a method of determining an association between a cold molecules a plant transcription factor or its fragment. The nucleic acid ctat encodes a plant transcription factor or its fragment. The nucleic cacid molecules, proteins and their fragments are useful for genome CC constructs for use in plant gene expression and transgenic plants. The nucleic acid molecules are useful as markers or probes. This sequence CC represents a maize transcription factor polynucleotide. XX

                                                                                                                                                                                                                                                                                                                                 CC is homeobox. Hill, leucine zipper, zinc finger, or other transcription CC factor. Also described are: a substantially purified maize or soybean CC transcription factor or its fragment defined above; a substantially CC purified antibody or its fragment which is capable of specifically CC binding to the transcription factor or its fragment above; a transformed CC plant; a method for determining a level or pattern in a plant cell of a CC determining a mutation in a plant method ic pathway; a method of CC determining a nutation in a plant; a method of producing a plant CC containing an overexpressed protein ore reduced levels of plant CC transcription factor; a method of determining an association between a polymorphism and a plant trait; and a method of isolating a nucleic acid CC that encodes a plant transcription factor or its fragment. The nucleic CC acid molecules, proteins and their fragments are useful for genome CC constructs for use in plant gene expression and transgenic plants. The CC constructs for use in plant gene expression and transgenic plants. The CC represents a maize transcription factor polynucleotide.

                                                                                                                                                                                     The invention describes a substantially purified nucleic acid molecule CC that encodes a maize, soybean or Arabidopsis thaliana transcription factor or its fragment, where the maize or soybean transcription factor is homeobox, HLH, leucine zipper, zinc finger, or other transcription factor is homeobox, HCH, leucine zipper, zinc finger, or other transcription factor or its fragment defined above; a substantially purified antibody or its fragment which is capable of specifically comparing to the transcription factor or its fragment above; a transformed company is method for determining a level or pattern in a plant cell of a transcription factor in a plant metabolic pathway; a method of determining a mutation in a plant; a method of producing a plant containing an overexpressed protein ore reduced levels of plant transcription factor; a method of determining an association between a collymorphism and a plant transcription factor or its fragment. The nucleic cacid molecules, proteins and their fragments are useful for genome constructs for use in plant gene expression and transgenic plants. The nucleic acid molecules are in plant gene expression and transgenic plants. The nucleic acid molecules are useful as markers or probes. This sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             망
                                    The invention relates to 1 of 232 isolated or recombinant polynucleotides encoding an Arabidopsis thaliana transcription factor, their variants, complements, fragments, or related polynucleotide with 31% to 95% sequence identity, where the plant possesses an altered trait as compared to a wild-type or reference plant, or the plant exhibits an altered phenotype as compared to a wild-type or reference plant, or the plant exhibits ectopic expression or altered expression of one or more genes associated with a plant trait as compared to a wild plant. Also included are a transgenic plant comprising the polynucleotides, a computer readable medium having stored sequence information, and identifying a homologue sequence from a database comprising a plurality of known plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Plant; ss; gene; transcription factor; transgenic; agricultus, metabolic chemical; environmental stress; drought; microbial disease resistance; herbicide resistance; seed yield; fruit yield; growth rate; leaf senescence; flower senescence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 22-AUG-2000; 2000US-0227439P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     recombinant polynucleotide is used for producing a plant having a modified trait, the method comprising selecting a polynucleotide that encodes a polypeptide or an antisense nucleic acid, inserting the polynucleotide or antisense nucleic acid into an expression vector, introducing the vector into a plant or a cell of a plant to overexpress the polypeptide or antisense nucleic acid, thereby producing a modified plant, and selecting for a modified trait (e.g. increased production of agriculturally useful proteins or metabolic chemicals, pest tolerance, environmental stress response (e.g. drought), microbial disease resistance, herbicide resistance, seed and fruit yield, growth rate, leaf and flower senescence and many other traits listed in the specification). The present sequence is one of the 232 polynucleotides encoding an A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 867 BP; 243 A; 189 C; 251 G; 184 T; 0 U; 0 Other;
